Full Stack Web Developer

PROFESSIONAL SUMMARY

Exceptional Full Stack Web Developer adept in the MERN stack, specializing in JavaScript, React, Node.js, and MongoDB. Proven problem-solving, teamwork, and swift learning abilities, including proficiency in Generative AI. Passionate about embracing new tech stacks and crafting scalable, user-friendly web applications efficiently.

WORK EXPERIENCE

virtual experience programme on Forage

Front-End Software Engineering

July 2024 - July 2024

Job responsibilities:

- Developed a travel date selection page using React and Backpack React library, ensuring user-friendly interface and seamless functionality.
- Customized web application to meet specific requirements and ran automated tests, enhancing reliability and bug-free performance.
- Engaged with a simulated project to gain hands-on experience in web application development, focusing on front-end dynamics.

PROJECTS

1. Ticket Management App | |

React | JavaScript | Tailwind CSS | Chakra UI

- Collaborated with designers to create an intuitive UI for the Ticket Management App using React and Chakra UI.
- Implemented user and admin authentication and registration features, ensuring secure access control.
- Conducted thorough testing and debugging to ensure reliability and stability of the application.

2. PharmaEasy Website Clone | |

React | JavaScript | Tailwind CSS | Chakra UI

- Developed an online platform for purchasing health and medicine products using React, ensuring a user-friendly interface.
- Implemented user registration and authentication features to secure the website and improve user trust.
- Enabled seamless product addition and removal from the cart, enhancing the shopping experience.
